

**SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT
MEMORANDUM**

DATE: August 3, 1988
TO: All Engineering Division Personnel
FROM: William J. Dennison /s/ by WJD
SUBJECT: Waste Oil Storage Tank Permit Processing

According to Rule 219(m)(8), Crankcase Drainage Oil Storage Tanks with a capacity less than 793 gallons are exempt from written permits. Tanks with capacity of 793 gallons or greater will require permits. In processing permit applications for Crankcase Drainage Oil Storage Tanks or Waste Oil Storage Tanks, please follow this guideline:

1. If the waste oil tank is located at a facility that requires a Rule 461 Permit (Gasoline service stations or equivalent private accounts), it will be included in the same permit, regardless of size. For example, if a gas station has a 500-gallon crankcase drainage oil storage tank, it will be included in the Rule 461 Permit for this facility.
2. If the waste oil tank is located at a facility that does not have a Rule 461 Permit, it will require its own separate permit, if its capacity is 793 gallons or greater. The waste oil tank application will be processed by Unit 10 as a class IV Application.

To accommodate the addition of the waste oil storage tank in the Rule 461 Permit, changes are being made in the Rule 461 application form and in the computer databases.
